## **PRP PENILE ENHANCEMENT**

### **PUMP PROTOCOL**

Immediately following procedure, pump for 10 minutes at a pressure of 10 mmHg.

Thereafter, pump for 10-15 minutes at a pressure of 10 mmHg, twice a day, every day, for at least 6 weeks. These two sessions can be back to back separated by a 5 minute rest between sessions.

[Shot works for erectile dysfunction (ED) without the pump; but even for ED, using the pump helps. For maximum growth or Peyronie's disease, pump is needed. For loss of sensation, the pump may slow improvement.]
